{
  /**
   * @file extensions.json
   * @description This file defines recommended and optional extensions for the workspace.
   *
   * VS Code uses this file to suggest extensions to anyone who opens the project.
   * - "recommendations": Extensions that are strongly suggested for all contributors.
   * - "unwantedRecommendations": Extensions that should be avoided in this workspace.
   *
   * This helps maintain a consistent development environment across the team.
   *
   * @usage
   * Place this file inside the `.vscode` folder at the root of your project.
   * VS Code will automatically read it and prompt users to install the listed extensions.
   *
   * @note This file is in JSONC (JSON with comments) format so comments are allowed.

# =====
# Pendex Theme
# "Portable Codex"
#
# THE CANONICAL THEME. Every other theme file mirrors this file's exact
# section layout (see README's Themes section) —only the colors change.
# Backgrounds are fixed at #1A1A1A / #262626 across every theme so no
# theme reads worse than another on a real terminal; every color below
# was checked against both and adjusted (hue preserved, only lightened)
# wherever it fell under WCAG-AA (4.5:1) for text colors, or 3:1 for
# intentionally de-emphasized ones (muted/comment/ignored/brightBlack).
#
# Inspired by:
# • Homebrew
# • Parchment & brass
# • Mathematical manuscripts

```

```

# • Borderlands-style bold outlines
# =====

# Pendex Brand
#####
#
# Keys under `source`/`web`/`style`/`terminal`/`configuration`/
# `documentation`/`testing`/`misc` are looked up by the CLI to color a
# compile/split job's title by its Category —they must match the
# Category string exactly (e.g. `configuration`, not `config`) or that
# job silently falls back to the theme's default styling instead.
```
