

Pendex (px) — Ways Ahead

Planned architecture — current, built classes shown for context; dashed = not yet built

1. Color class

Replace picocolors with a truecolor ANSI renderer (hex support + capability/degrade check). Unblocks #2.

2. ThemeManager + TOML themes

Singleton mirroring ConfigManager. default.toml (brand palette) and dracula.toml become swappable theme files.

3. Test suite catch-up

Rewrite config.test.ts for ConfigManager; delete settings/ validator tests; move setup.ts off node:fs to Bun-native.

4. React-like CLI exploration

Exploratory. core/ as hooks, views/ as components already sets this up; unscoped beyond that.
